

Kalypsys, Inc. of San Diego, CA has an immediate opening for a Scientist to lead a Bioanalytical Research group within a Pharmaceutical Sciences department. The successful candidate will head the bioanalytical laboratory responsible for the development and implementation of LC/MS/MS approaches for the quantitative analysis of small molecules in biological matrices from non-clinical species. Successful job performance includes the ability to manage and conduct routine and non-routine analysis, initiation of continuous improvement processes and the ability to lead assay qualification projects. Additional responsibilities will include the facilitation and oversight of CRO technology transfer and GLP method validation. The successful candidate will use independent judgment and interpretation, apply basic scientific principles and technical expertise to accomplish business objectives. In addition, the position provides the opportunity to contribute to qualitative analysis of small molecules and internal technology development through collaborations with cross-functional peer groups including DMPK and Pharmacology. Other desirable attributes include a working knowledge of the overall drug discovery and development process as well as the ability to work in a methodical, organized and transparent manner.

The successful candidate will have a B.S. degree in Analytical Chemistry or related field with 6-8 years or an M.S. degree with 3-6 years of relevant experience. In depth knowledge of theory and operation of liquid handling systems, HPLC, LC/MS and LC/MS/MS instrumentation and software for use in quantitative analysis of small molecules in biological matrices is a must. In depth knowledge of best practice and current trends in bioanalytical research, including PPT, LLE, SPE and on line extraction techniques is expected. A demonstrated ability to supervise people and to work well in a team environment, Creative and innovative problem solving and excellent oral and written communication skills are required.
